

## Realize Real Value from Integrated Data Across the Business

Discover trends, highlight anomalies, and gain insights about any data stored in your SAP or other enterprise applications to make data-driven decisions in real-time.

### Protera Analytics for the Enterprise

#### Centralize data for accurate, accessible real time reporting

Protera provides a low/no code single repository for structured and unstructured data from mission critical and ancillary data sources in a scalable, available, secure environment with enforced data management best practices.

#### Maximize your investments and drive down cost

Reduce reliance on legacy BI platforms while reducing the cost to access data. Gone are the days of waiting on reports to make decisions with access to real-time analytics dashboards.

#### Foster a data-driven culture

Explore opportunities to innovate, reduce cost, and increase efficiency by using centralized data in the cloud in an agile and efficient way across the business, driving data-driven decision making and cloud billing analytics.

### Enable Your Business to Make Data Driven Decisions

# Jumpstart your data analytics strategy

Get started today with powerful data mining capabilities designed specifically for AWS and Microsoft Azure utilizing Protera's industry standard approach to adopting analytics in the cloud:

## 1 Determine business outcomes

Define key objectives to determine which data sources to integrate. Examples may include:

- Business wants to perform predictive analysis on trending costs over time
- Company wants to use existing data to predict failure rate in certain manufacturing equipment
- Users are able to easily consume data that is relevant to role or department.

## 2 Identify all data sources

Discover data sources to be used for analytics - often disparate data spread across hundreds of systems, applications, spreadsheets, and documents - to be used for data ingestion to model data appropriately to achieve business outcomes.

## 3 Set up proper data analytics platform

Establish a single source of truth to perform data modeling of a centralized data lake across the business. This enables the business to perform ELT/ETL operations to enrich data useful to the business.

“Protera's knowledge, professionalism and passion for the cloud and ability to act as a trusted advisor have made things run very smoothly and has enabled success with our Ingevity Data Platform Project that I'm positive would not have been achieved without them.”

Alan Eager  
Lead Data Architect, Data Strategy & Governance

## Trusted for over 20 years

Protera is a globally certified SAP partner and was the first service provider to run SAP production on the public cloud. As an Advanced tier APN AWS partner and a Preferred Migration partner for SAP on Azure migrations, Protera has technical qualifications that no other service provider can match.

## Start making data-backed decisions today.

An initial data analytics platform can be deployed within 4-6 weeks – schedule your consultation or data analytics workshop today.
