

Increasing volumes of structured and unstructured data flowing into organizations at a faster speed than ever before, are driving IT teams to evaluate and deploy real-time business solutions. Organizations already running SAP® or evaluating SAP solutions have access to the innovative in-memory database platform SAP HANA to transform their IT environment to best meet new business requirements with real-time analysis.

While the SAP HANA in-memory database platform is available as an on premise solutions to be deployed on dedicated HANA appliances, the cloud offers unique ways to reduce the cost and complexity of deployment and running SAP HANA based applications.
